Session ID: 17	Modules Used: X-Ray Analysis	Date: 23 July 2026 09:06 PM
----------------	------------------------------	-------------------------------

X-Ray Analysis

Detected Region: Chest (Frontal/Pa View)

Finding	Confidence
Right-sided pleural effusion	High
Normal left lung	High
Normal cardiac silhouette	High
Normal mediastinum	High

Chest X-ray shows a moderate right-sided pleural effusion with otherwise normal cardiac silhouette and clear left lung fields. Clinical correlation and further investigation are needed to determine the etiology of the effusion.

Recommendations

- Clinical correlation to determine cause of pleural effusion (consider infection, malignancy, cardiac disease, or other systemic conditions)
- Consider ultrasound of the chest to characterize the effusion and assess for loculation
- Depending on clinical presentation and severity, consider thoracentesis for diagnostic and/or therapeutic purposes
- Follow-up chest X-ray after treatment to assess resolution

■ Urgency Level: Urgent — Same day attention required
