

NexRay AI

Medical Assistant Platform • Clinical Decision Support Report

10 August 2026 | 08:37 PM

Session ID: 55

Patient: Francis Asuka

Modules: X-Ray Analysis

X-Ray Analysis

Detected Region: Skull (Lateral View)

No significant findings detected.

■ **Urgency Level:** Routine

Recommended Tests

- CT head with bone windows (to exclude fractures and intracranial pathology)
- Clinical neurological examination documenting any focal deficits or signs of raised intracranial pressure

Suggested Treatment

- Supportive care pending clinical assessment
- Analgesia if patient reports headache

Next Steps

- Correlate with clinical presentation and mechanism of injury if trauma suspected
- Consider advanced imaging (CT) if any neurological symptoms present

Summary: Lateral skull X-ray shows normal bony architecture without obvious acute fracture or gross intracranial pathology. Clinical correlation is essential. If trauma history or neurological symptoms are present, CT imaging is recommended for definitive assessment.
